

Experiment No: 5

Airline Reservation System

Aim

To design and develop a responsive Airline Reservation System using HTML, CSS, and JavaScript that allows users to search flights, log in, book tickets, and view booking details.

Output

- [Home](#)
- [Search Flight](#)
- [Book Ticket](#)
- [Login](#)

E-Ticket

Booking ID : SF2026001

Passenger : John David

Flight : SF101

From : Chennai

To : Delhi

Date : 20-08-2026

Seat : Window (12A)

Status : Confirmed

[Print Ticket](#)

Search Flights

From	To	mm/dd/yyyy	Select Class	Search Flight
-----------------------------------	---------------------------------	---	---	--

Flight No	Airline	Departure	Arrival	Seats	Price
-----------	---------	-----------	---------	-------	-------

Book Your Ticket

Passenger Name	Age	Select Gender	Flight Number (e.g. SF101)	Select Seat	Book Ticket
---	----------------------------------	--	---	--	--

Result

The Airline Reservation System website was successfully developed using HTML, CSS, and JavaScript. The application provides a responsive interface that enables users to log in, search for flights, book tickets, and view their booking details successfully.
